# How Smart Manufacturing Is Changing the Electronics Industry

Smart factories will be able to integrate the supply chain, production line, and quality control according to the dynamic market requirements. It will be a completely connected and flexible manufacturing system that will be able to create personalized and customized products as and when needed. They will have to rely on increasingly smart sensors and configurable robots.

At the moment, however, the idea of setting up a smart factory may seem more like the stuff of science fiction. However, the rapid development across a wide range of technologies is fueling the shift towards a self-optimizing factory floor like never before. Several manufacturers, even ones in developing countries, have already started implementing these technologies.
