How the Industry 4.0 could be a key player in mitigating climate change?

Industry 4.0 and climate change are an unusual pair, but they have obvious things in common: They're systemic, they're complex, and they'll disrupt how we as a society conceive of value creation. The global competitive landscape is steadily shifting towards digitalisation of all activities and using big data analytics to raise cost efficiency, quality, and production speed.

While climate change will force us to think more and more about the ecological footprint of a product The industry 4.0 contribution to establishing a circular economy and a greener industry. "Smart manufacturing" allows the gathering of data along the lifecycle of a material, understanding the material input, and considering the end-of-life of a material, instead of putting it to landfill.
