

MICETIMES ASIA

The rating of the most technologically advanced countries in the world.

In the ranking leaders of the United States.

In the past technological innovations were found only in the homes of the richest people in the world.

But today, things have changed: technological innovations are in almost every home.

The development of technology over time has led to growth in consumer demand that made the IT industry one of the most profitable in the world.

In 2016, 24% of the world's research had on the sector of computer technologies and electronics, and the cost of the software and Internet sector totaled 12%.

Malaysia is a newcomer to the technology market, however, there are companies like Vitrox Corp, manufacturer of semiconductors and microchips, which are critical for high-tech products.

This year the cost of Vitrox increased by 24%. Experts predict that by 2020, the digital sector will contribute up to 20% of GDP of Malaysia.

Partly this is due to the program of support of startups, which was recently launched in the country.
