

## Manufacturing and design giant ViTrox to attend Nepcon China 2017 (25th – 27th April)

World-leading automated machine vision inspection solution providers ViTrox, based in Penang, Malaysia, have announced that they will be attending Nepcon China in Shanghai this year, as the established microelectronics event presents its 27th trade show.

ViTrox recently announced another year of record revenue and net profit, and expects significant growth in 2017, with their automated board inspection being hailed as a major factor in their outstanding recent success. This was partly down to a lower provision for taxation being applied, with a 5 year pioneer status having been granted by the government, to enable them to take action relating to the design, development and manufacture of embedded high-density electronic modules.

ViTrox will be presenting from booth 1H21 at Nepcon China, and are looking forward to sharing 'the most advanced SMT testing program'.
